

Thin-film solar cell preparation method

How efficient are Sb₂S₃ thin film solar cells?

As Fig. 6 and Table 2 shown, the Sb₂S₃ thin film solar cells based on the absorber grown at 310 °C exhibit a V_{oc} of 0.70 V, a J_{sc} of 7.98 mA/cm², a FF of 50.00% and an efficiency of 2.79%.

Can TiO₂ thin films be used for photovoltaic applications?

In this work, we develop TiO₂ thin films using the sol-gel method combined with the spin-coating deposition technique, and investigate the structural and optical properties of these thin films for photovoltaic applications.

Can perovskite thin-film fabrication be used to make large-area solar cells?

PSC researchers are working on overcoming the technological impediments to the synthesis and commercialization of large-area PSCs. Not all perovskite thin-film fabrication technologies have been used to create large-area solar cells despite some methods such as thermal evaporation having significant scalability potential.

Does annealing temperature affect the quality of Sb₂S₃ thin film?

The effect of Sb concentration and annealing temperature on the quality of the Sb₂S₃ thin film was investigated by Srikanth et al. and noted the increase in the grain size and the decrease in the strain and dislocation density with the increase of antimony concentration.

How stable are planar solar cells based on ITO/CdS/Sb₂S₃/Au?

A highly stable solar cell with a PCE of 3.5% has been reported for the optimized planar solar cells based on ITO/CdS/Sb₂S₃/Au by growing high-quality Sb₂S₃ thin film by the RTE method and avoiding the use of oxide ETL and common HTL to address the discoloration effect and degradation of HTL.

Are 3-cycle spin-deposition TiO₂ thin films suitable for photovoltaic applications?

These experimental results, compared with other reported work, confirm the optimal use of our 3-cycle spin-deposition TiO₂ thin films treated with the acetylacetone stabilizer for photovoltaic applications.

We first discuss the fundamental structure and properties of Sb₂S₃ and then show how morphology and structural changes in Sb₂S₃ thin films produced using various fabrication techniques and conditions affect solar cell performance.

Preparation of thin films - Download as a PDF or view online for free . Preparation of thin films - Download as a PDF or view online for free. Submit Search. Preparation of thin films 0 likes 6,041 views. Gandhimathi ...

Pulsed laser deposition (PLD) is a simple and extremely versatile technique to grow thin films and nanomaterials from a wide variety of materials. Compared to traditional fabrication methods, PLD is a clean

physical vapour deposition approach that avoids complicated chemical reactions and by-products, achieving a precise stoichiometric transfer of the target ...

We provide details on the development of instrumentation and methodology to overcome the common difficulties that the vacuum-related techniques face for fabrication of perovskite thin films and perovskite solar ...

A new solution-based method to fabricate $\text{Cu}_2\text{ZnSn}(\text{S},\text{Se})_4$ (CZTSSe) thin films is presented. Binary and ternary chalcogenide nanoparticles were synthesized and used as precursors to form CZTSSe thin films. The ...

Additionally, James E. Bishop et al. fabricated a thin film of perovskite layer within a solar cell via spray deposition, yielding a power conversion efficiency of 19.4 % [25]. These advantages significantly enhance the fabrication of perovskite thin films. Nevertheless, the surfaces of films prepared using the spray deposition method tend to exhibit relatively rough ...

ITO has various applications such as antistatic applications, architectural coatings, transparent electrodes in solar cells and flat panel displays, gas sensors, organic light-emitting diodes (OLED), and humidity sensing. There are several methods to prepare ITO thin films, each with specific advantages and limitations. ITO thin film properties are directly related ...

This work demonstrated a facile and low-cost solution method to prepare CZTSSe thin film solar cell. Compared with the commonly 2-MET resulted film, the EG ...

In this work, we have prepared TiO_2 thin films by the sol-gel method combined with the spin-coating deposition technique and studied the effect of the acetylacetone stabilizer on the structural and optical properties of these thin films for photovoltaic applications.

In this work, we have prepared TiO_2 thin films by the sol-gel method combined with the spin-coating deposition technique and studied the effect of the acetylacetone stabilizer ...

Not all perovskite thin-film fabrication technologies have been used to create large-area solar cells despite some methods such as thermal evaporation having significant scalability potential. In recent publications, the ...

This review summarizes the current research status on the fabrication methods, device structure selection, design, and optimization of Ag_2S thin films. Finally, insights into achieving high-efficiency Ag_2S devices by ...

This review summarizes the current research status on the fabrication methods, device structure selection, design, and optimization of Ag_2S thin films. Finally, insights into achieving high-efficiency Ag_2S devices by improving the crystallinity of the absorber layer and reducing interface defects are discussed.

Thin-film solar cell preparation method

Copper indium gallium selenide (CIGS)-based solar cells have received worldwide attention for solar power generation. CIGS solar cells based on chalcopyrite quaternary semiconductor $\text{CuIn}_{1-x}\text{Ga}_x\text{Se}_2$ are one of the leading thin-film photovoltaic technologies owing to highly beneficial properties of its absorber, such as tuneable direct band gap (1.0-1.7 eV), ...

The major advantages of thin-films solar cells compare to crystalline and polycrystalline solar cells are; (1) In the production processes, fewer amounts of energy and materials are used. (2) Due to the relevancy to the large area, it maintains low-cost production. There are also some failures faced by solar-cell thin film technologies such as:

We first discuss the fundamental structure and properties of Sb_2S_3 and then show how morphology and structural changes in Sb_2S_3 thin films produced using various ...
