What is a charger Pile (Point)?

Each charger pile (point) consists of 6 60kW fully SiC-based power converter modules. For isolated charger pile design, high-voltage and high-frequency capabilities of SiC MOSFETs can simplify topologies and controls significantly. The direct benefit is power density improvement and system cost reduction.

Why do electric vehicles use Vienna rectifiers?

Fast charging, grid stability, energy economy, and the smooth integration of electric vehicles into the electrical grid are all made possible by Vienna rectifiers. When used in battery energy storage systems (BESS) for electric vehicle charging infrastructure, Vienna rectifiers allow for effective discharge and charging of the batteries.

How many power converter modules are in a charger pile?

Why should you choose an SCU EV charging pile?

SCU EV charging pile is a professional supplier of EV battery chargers. They focus on every detail to provide simple, fashionable, and user-friendly human-computer interaction interfaces for controlling and managing various types of EV charging piles, including high power charging stations and CCS chargers.

Can a Vienna Rectifier be used with an off-board charger?

Because of this benefit, the charging system based on the Vienna rectifier can be utilized with off-board chargers as well as on-board chargers. The Vienna rectifier is normally found in power supplies, motor drives, and other similar applications that require careful rectification of three-phase AC to DC.

What MOSFETs do Charger pile modules use?

Currently, charger pile modules of the state of art design and in volume production almost all use 650V Si MOSFETsin order to get a decent power density and efficiency out. For a design with power over 6 kW,3-phase input becomes necessary.
