

# Washington Lithium Battery Technology

#### What is a lithium-ion battery and how does it work?

The lithium-ion (Li-ion) battery is the predominant commercial form of rechargeable battery, widely used in portable electronics and electrified transportation.

#### What are lithium-ion batteries used for?

Not only are lithium-ion batteries widely used for consumer electronics and electric vehicles, but they also account for over 80% of the more than 190 gigawatt-hours (GWh) of battery energy storage deployed globally through 2023.

#### Why is lithium ion a good battery?

The lithium ions are small enough to be able to move through a micro-permeable separator between the anode and cathode. In part because of lithium's small atomic weight and radius (third only to hydrogen and helium),Li-ion batteries are capable of having a very high voltage and charge storage per unit mass and unit volume.

#### Why do lithium batteries use silicon?

The companies add silicon to the anodes of lithium batteries because it can store much more energythan graphite alone -- but it presents technical challenges. OneD's Sinanode technology creates silicon nanowires dispersed across the surface and within the pores of the graphite.

What are Li-ion batteries used for?

High energy densities and long lifespans have made Li-ion batteries the market leader in portable electronic devices and electrified transportation, including electric vehicles (EVs) like the Nissan Leaf and the Tesla Model S as well as the hybrid-electric Boeing 787.

#### Can a battery store more energy than a lithium ion battery?

CEI researchers are pushing the envelope on batteries that can store much more energythan current lithium-ion cells. The goal is to develop breakthrough, but low-cost, materials and battery designs that can fully utilize new high-performing materials.

Developing sodium-ion batteries. After its success supplying lithium-ion batteries to the electric vehicle market, Northvolt has been working secretly on a sodium-ion battery technology and is now ...

Washington state benefited from the BIL on October 19, 2022, when the U.S. Department of Energy (DOE) awarded \$2.8 billion to 20 recipients, two of which are located in the Evergreen state. The money is designed to boost domestic production of batteries and critical minerals used in electric vehicles.

What is a lithium-ion battery and how does it work? The lithium-ion (Li-ion) battery is the predominant

## Washington Lithium Battery Technology

commercial form of rechargeable battery, widely used in portable electronics and electrified transportation.

How it works: Group14 Technologies has developed a way to enhance battery performance by replacing graphite anodes with silicon carbon material, CEO Rick Luebbe told Axios. This allows batteries to store up to ...

Sila"s materials drive battery performance enhancements in consumer electronics devices and will also power electric vehicles like an upcoming version of the electric Mercedes-Benz G-Class. Committed to ...

WOODINVILLE, Wash. and MOSES LAKE, Wash., April 4, 2023 -- Group14 Technologies today announced the commencement of construction of a second commercial-scale U.S. Battery Active Materials (BAM-2) factory in Moses Lake, WA, in support of domestic efforts to advance the electric vehicle (EV) market.

A lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li + ions into electronically conducting solids to store energy. In comparison with other commercial rechargeable batteries, Li-ion batteries are characterized by higher specific energy, higher energy density, higher energy efficiency, a longer cycle life, and a longer ...

Group14 launched its first commercial-scale Battery Active Materials factory (BAM-1) in Woodinville, Washington in April 2021. Engineered to produce 120 tons per year of ...

The Glacier battery storage pilot project entails installation of a 2 megawatt (MW) / 4.4 megawatt-hour (MWh) lithium-ion battery system. The state-of-the-art system is tied to PSE''s electric distribution power grid and located in the existing Glacier

Washington state benefited from the BIL on October 19, 2022, when the U.S. Department of Energy (DOE) awarded \$2.8 billion to 20 recipients, two of which are located in the Evergreen ...

The Glacier battery storage pilot project entails installation of a 2 megawatt (MW) / 4.4 megawatt-hour (MWh) lithium-ion battery system. The state-of-the-art system is tied to PSE''s electric ...

A brand new substance, which could reduce lithium use in batteries, has been discovered using artificial intelligence (AI) and supercomputing. The findings were made by Microsoft and the Pacific ...

CEI researchers are pushing the envelope on batteries that can store much more energy than current lithium-ion cells. The goal is to develop breakthrough, but low-cost, materials and battery designs that can fully utilize new high ...

American Battery Technology Company (ABTC) champions sustainable and ethical sourcing of critical battery materials through lithium-ion battery recycling, battery metal extraction technologies, and primary

### Washington Lithium Battery Technology

resource development for use in batteries that power electric cars, grid storage applications, and consumer electronics and tools. NASDAQ: ABAT

WOODINVILLE, Wash. and MOSES LAKE, Wash., April 4, 2023 -- Group14 Technologies today announced the commencement of construction of a second commercial-scale U.S. Battery Active Materials (BAM-2) factory in ...

Seattle, WA (October 11, 2024): The University of Washington Clean Energy Institute (UW CEI) unveiled plans to expand its open-access climate tech facility, the Washington Clean Energy Testbeds, to include state-of-the-art capabilities for scaled prototyping of ...
