

What does the flashing light of the energy storage charging pile mean

How does a battery charger work?

Bulk - The charger throws amps in to the battery- as many as it can (while being limited by any specific limits set in the charger). As loads of amps pile in to the battery - the battery voltage rises. When the battery voltage reaches the specified absorption V - bulk stops - and absorption starts.

What does float mean on a battery charger?

Float - The charger now just holds the battery at a lower specified voltage- trickling the lowest number of Amps in to the battery that it can- to maintain the float Voltage. Feedback please - am I way off the mark ?
